

Fabric Deodorizer (Lavender) 5L

Alle's ClinX Labs Fabric Deodorizer (Lavender) is an institutional textile freshener that neutralises fabric-embedded malodour compounds between wash cycles. Active odour neutralisation — not masking. Neutral pH. Safe on all institutional textiles. 5-litre bulk refill for institutional deployment.

■ 1499 / 5 L

OVERVIEW

The interval between laundry cycles is an odour management gap that most institutional housekeeping programmes address inadequately. In a 100-bed hospital ward where curtains are changed monthly, soft furnishings cleaned quarterly, and stored linen rotated weekly, malodour compounds accumulate continuously in the textile fibres during the interval between treatments.

KEY FEATURES

Active odour neutralisation

molecular interference with malodour compound structure — eliminates odour at the chemistry level rather than overlaying it with competing fragrance.

Neutral pH

safe on all institutional textiles including upholstery, curtains, stored linen, mattress covers, and soft furnishings without colour impact or water-marking.

Lavender fragrance profile

appropriate for healthcare, educational, and industrial welfare environments — calming, clean, and universally acceptable across occupant demographics.

5-litre institutional refill

compatible with any standard trigger spray bottle — eliminates per-unit aerosol cost and plastic packaging waste at institutional deployment volume.

Reduces unnecessary wash frequency

targeted odour management between wash cycles reduces total wash load — measurable water, energy, and fabric degradation savings at institutional scale.

PRODUCT SPECIFICATIONS

Active system	Odour-neutralising aldehyde compounds + lavender fragrance system
pH	Neutral
Specific gravity	0.98–1.00 at 25°C
Formulation type	Aqueous fragrance-active solution
Appearance	Clear to slightly hazy liquid
Fragrance	Lavender — calibrated for healthcare, educational, and industrial welfare environments

APPLICATION & USAGE

- Application distance** spray lightly and evenly from 20–30 cm distance onto the textile surface. A fine mist is sufficient — do not saturate.
- Soft furnishings** spray upholstery and curtains lightly 2–3 times per week in occupied institutional areas. Allow to air-dry before contact.
- Stored linen** spray lightly before folding and placing in storage to prevent odour development during the storage interval.

- Healthcare applications** apply to patient area curtains, soft furnishings, and mattress covers during the interval between scheduled washing cycles. Avoid direct application to wound-contact or sterile field areas.
- Industrial welfare areas** apply to welfare room soft furnishings, locker area textiles, and rest room upholstery to maintain acceptable ambient conditions between scheduled cleaning cycles.

CAUTION & STORAGE

For textile surface application only — not a disinfectant or surface cleaner. Do not apply to wound-contact surfaces, sterile field areas, or items in direct contact with open skin. Patch test on silk or dry-clean only fabrics before full application — some delicate fabrics may be affected by the fragrance compounds. In case of eye contact, rinse with water. Keep out of reach of children. Store in original sealed container below 30°C, away from direct sunlight. Keep container
